Triple i announces green initiatives in line with long term sustainability objectives

Wollongong, NSW – As part of Triple i's commitment to the environment, we are continually seeking smart solutions to reduce emissions and our ecological impact. From the installation of solar energy panels to the introduction of electric vehicles (EV) within our fleet, our practical green initiatives bring us one step towards achieving our long-term sustainability goals.

Our latest project is the commissioning of a 39kW commercial solar photovoltaic (PV) system, installed at our head office in Unanderra. The site brings ample space for the new solar system with promise of expansion in the future.

With an objective of reducing the company's electricity consumption, a 39kW solar PV system in Sydney is expected to produce around 55,500 kWhs each year, or 1000kWhs a week (on average). This considers cloudy days, rainy days, and the like.

Fitting with the company's brand and vision, Managing Director Gary Harding, was interested to pursue the project in an effort to reduce the carbon footprint of his operations by 69.75 tonnes of carbon a year. This is the equivalent of 398,571 computers, or 1,585 passenger cars a year.

In conjunction, Triple i have introduced its first hybrid plug-in fleet vehicle, with a move in the future to include more hybrid or full electric vehicles (EV) where possible. Two EV charging stations are to be installed on each site in Unanderra (Head Office and, Sales and Construction Office), which will be available for charging company, staff, and customer electric vehicles.

Our business plan is focused on sustainability and adaptation to an ever-changing market to ensure Triple i will be operating for at least another 35 years.
