Triple i Embraces Expansion and Growth with our Digital Transformation Journey

Wollongong, NSW – Triple i have recently invested in a powerful server unit, installed at our head office in Unanderra.

This server is running as a Hypervisor, meaning that it does not have its own operating system. Rather, it can have many different operating systems living within a single machine. This allows Triple i to use a variety of different machines, in the one location, at the same time.

In the past, when developing Programmable Logic Controller (PLC) code for a customer site, Triple i Engineers found themselves using their own computers to communicate directly with the PLC's. This reconfiguring and connecting wastes valuable development time. Having this server communicate directly with the PLC's, at all times, means that it is only configured once.

This server allows Triple i to create an exact copy of a customer's system. By creating an exact replica of a customer's system, Triple i can be sure that the tested system will work seamlessly when installed on site.

Another key benefit of this server is that Triple i Engineers can connect straight to it from anywhere in the world. This has been particularly important during the COVID-19 pandemic, as most Engineers were working from home. By giving Engineers the ability to develop and test PLC code on the physical piece of hardware ensures continuity of design, even throughout the pandemic.

Having this machine has meant that Triple i has been able to consolidate all the software development. This means that all the software and licenses are all stored in the one location, rather than being strung out over multiple different machines.

This new approach has centralised the way that Engineers communicate with PLC's and manage licenses, streamlining development and increasing up-time.

For further information, or media enquiries please contact: admin@triplei.com.au, or call 1300 422 444.

About Triple i

Triple i is a one-stop-shop for all your control, data, electrical, instrument, and mechanical needs with over 35 years of experience. We provide a range of technology-based projects, consultancy, maintenance, and support services in the industrial sector. With over 65 skilled employees, Triple i provides the best product and services, with integrated solutions designed for client's needs.

INTEGRATION - INNOVATION - INSIGHT
