Triple i Team LV Training Day

Unanderra, NSW – We recently completed a training day which has empowered our team with the skill and knowledge to carry out and complete Low Voltage (LV) panel rescue procedures and to perform cardiopulmonary resuscitation (CPR) on a casualty in a range of situations.

Participants were accredited with *HLTAID009: Perform cardiopulmonary resuscitation* and *UETDRRF004: Perform rescue from a live LV panel*. Due to the nature of our work, this is necessary training for our team at Triple i. The combined LV and CPR training is essential for personnel conducting live work or working with live switchboards.

Training was conducted on site at our head office in Unanderra (Waverley Place), where we were able to include individuals from various departments to ensure we have a wide range of crossed trained individuals. From Electrical Construction to Operational Support, this training ensures we are better prepared for the unexpected, on and off site.

The course consisted of real-life practical skills and knowledge to allow the participants to be assessed as competent in providing CPR in line with Australian Resuscitation Council (ARC) Guidelines as well as rescue procedures from an LV apparatus.

The course specifies the mandatory requirements of rescue from a live LV panel and how they apply in the context of transmission, distribution, or rail work functions. It encompasses responsibilities for, health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

With continued training and development planned, our goal at Triple i is to ensure our team are safe and if necessary are capable and confident to aid in the saving of life, or prevention of injury during an incident or dangerous situation.

At Triple i, we are committed to the health and safety of our employees, customers, community, and the environment, while delivering the quality services that meet or exceed our clients' expectations.
