

SOLUTION SPOTLIGHT

SALES

REAL-TIME INSTRUMENTATION

If you cannot measure it, you cannot control it! At Triple i, our sales team identifies, specifies, and supplies instrumentation that provides real-time insight into your operations. As such, helping you make intelligent decisions, optimise performance, and overall reduce expenses.

Intelligent decisions, in real-time, enable you to take control of your processes. With real-time data and analysis resources, you can improve repair and troubleshooting times, and as a result, identify issues as they occur and minimise impact process failures. This not only empowers decision-makers but creates a more controlled, optimised, and safer working environment.

Our Sales team has the product knowledge and industry experience to deliver your data to you as your processes occur, to provide the opportunity for faster and more informed decisions. We source and supply control system hardware, instrumentation, sensors, and actuators for varied real-time measurement and analysis applications. Combined with our support services, we organise equipment configurations and calibrations, guaranteeing the accuracy and quality of data collected.

We help measure, monitor, and control pressure, temperature, level, and flow of media across all mediums, including liquids, gas and air, and solids. Whether you require high accuracy level measurement or general object sensing, to be controlling flow or isolating a line, or high temperature or hazardous areas devices, we have the solution.

We partner with the best brands and quality manufacturers to deliver outcomes across diverse industries. From water treatment plants to metal processing, our customer-centric approach means we focus on your specific operational needs and process requirements. We understand that each process is unique with different objectives and desired outcomes.

From designing to maintaining, we foster our client relationships, ensuring open communication and transparency. We partner with our clients to ensure they are satisfied not only with the end product but with the complete project from beginning to end. Our range of instrumentation, analysers, and automation packages is backed by our world-class service, supporting clients with maintenance and after-sales support.

We have the technology that can be specified and tailored to your process conditions. To measure, monitor, and control your processes effectively, contact our Sales team today!
